

Health care for everyone: Good for us and for our Environment

Our current health care system is “getting away with murder.” It values profits more than the health of Americans. Often we must choose: Get the health care we need and rack up massive debt, or forego needed health care. Whether on a state or a national level, making sure everyone has good health care is not only kinder; it’s smarter. Prevention and timely care saves lives and money. Without compromising quality or access or underpaying health care professionals, it would save billions of dollars annually by reducing bureaucracy and administrative waste.

Some of these funds could be used to:

- Help build a sustainable, efficient 21st century transportation system
- Invest in clean, sustainable, alternative energy
- Maintain and add to our open spaces, wilderness areas, parks, and recreation areas
- Provide programs that teach our children about enjoying and caring for our beautiful state and country.

Efficient use of technology would reduce pollution and waste of resources

- Simplified financing and reimbursement systems would reduce paperwork and duplication of record keeping
- Centralized database would improve diagnostics, resulting in less use of resources and lower energy costs

For more info on how you can help make it happen, go to www.couniversalhealth.org
